# Fleet Performance & Delivery Efficiency Dashboard – Project Summary

## Objective

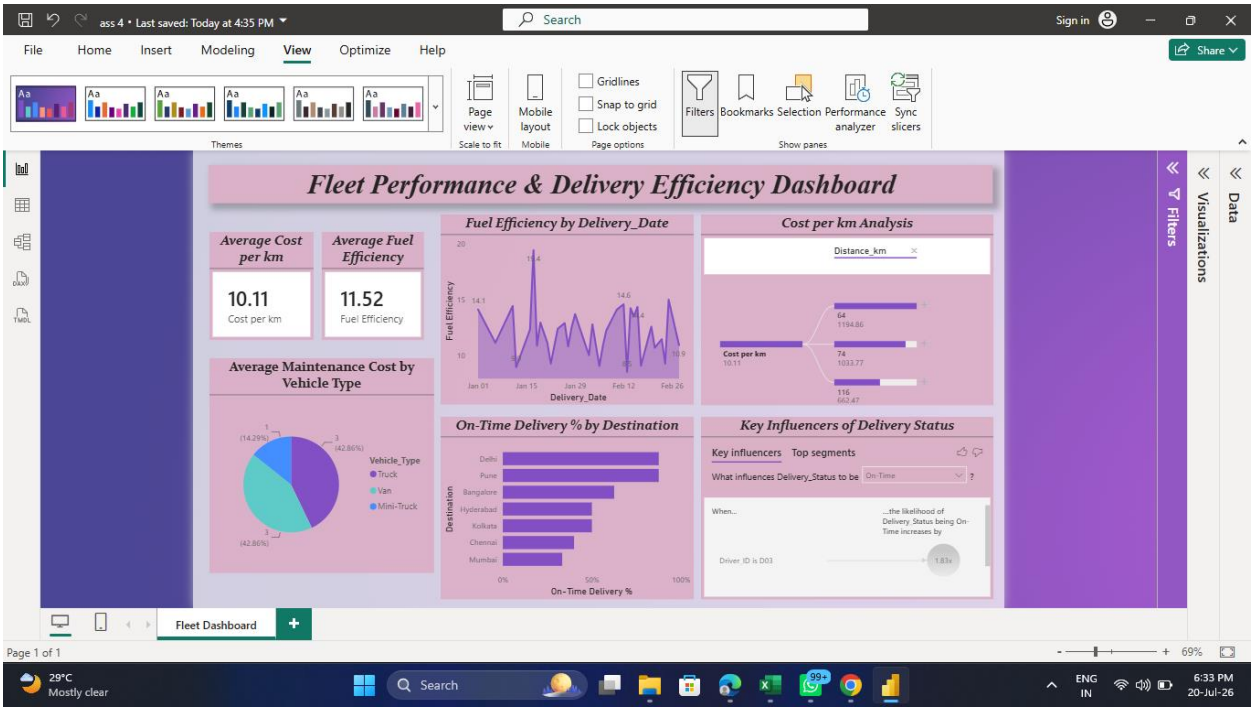

The objective of this project is to analyze fleet performance and delivery efficiency using Power BI. The dashboard helps monitor key logistics metrics such as fuel efficiency, on-time delivery percentage, maintenance cost, and cost per kilometer. By visualizing these metrics, the dashboard supports data-driven decision-making to improve operational efficiency, reduce transportation costs, and optimize fleet utilization.

---

## Key Insights

- The dashboard provides a clear view of **On-Time Delivery %** across different destinations, helping identify locations with better delivery performance.
- **Fuel Efficiency** trends over time help evaluate vehicle performance and identify opportunities to reduce fuel consumption.
- **Average Cost per km** combines fuel and maintenance expenses, enabling better cost monitoring and route planning.
- The **Average Maintenance Cost by Vehicle Type** highlights which vehicle categories require higher maintenance expenditure.
- The **Key Influencers** visual identifies factors that impact delivery status, while the **Decomposition Tree** allows detailed analysis of cost per kilometer based on vehicle type, maintenance cost, and travel distance.
- Overall, the dashboard enables logistics managers to monitor fleet performance, improve delivery efficiency, and support informed operational decisions.
